

Environmental Policy

This Environmental Policy forms the basis for our environmental and climate thinking.

We regard it as a long-term commitment that must be realized in stages and to the extent of resources and based on our prioritization for a cleaner future by:

- Not only meeting the authorities' minimum requirements, i.e. environmental legislation, and regulations, but going a step further, related to our environmental aspects, where it is technically and economically possible regarding the environmental benefits.
- Apply a holistic approach to our services' environmental & climate disruption.
- Choose work methods that are gentle on the environment & climate.
- Develop and market transport services with constantly improved environmental characteristics.
- If necessary and when the opportunity is given, carry out environmental & climate work in collaboration with our Customers and Suppliers. In the case of initiatives from environmental authorities, environmental organizations, and residents, we are always open to cooperation.
- Involve and continuously train all Employees in our environmental & climate work.
- Inform about our operations and the environmental & climate impact of our services in an open and objective manner, on our website www.nakeri.se/
- Comply with our environmental policy by working to prevent pollution.
- Continually work with improvements that benefit the environment through ongoing follow-up of our established, comprehensive, and detailed environmental goals.

The board member and management have the ultimate responsibility for ensuring that the environmental policy is documented, introduced, maintained, and communicated to all persons working on behalf of Nova Åkeri AB and that it is accessible to the public.
